

Lifeline Sector Awareness Workshop – 4 hours

The HSEM Critical Infrastructure team has identified five subject sectors - as outlined in the National Infrastructure Protection Plan – considered as “Lifeline” sectors. This workshop focuses on each of the five: Energy, Water, Communications, Transportation, and Emergency Services to give local and regional jurisdictions a better understanding of what those assets are, what components they can consider ‘critical’ and how to identify them for entry into the ACAMS database.

Lifeline sector awareness also plays an important role in understanding risk at the jurisdictional level. After workshop completion, students will have a better understanding of critical infrastructure in their communities and the impact Lifeline sector assets have on a community’s resiliency. This concept follows the PPD 8 and National Preparedness Goal initiative of “Whole Community” planning.
